

The background of the entire page is a close-up photograph of a brown umbrella. The surface of the umbrella is covered in numerous small, clear raindrops. The raindrops are of various sizes and are scattered across the entire surface. The umbrella's ribs are visible as dark, curved lines that divide the surface into several sections. The overall color palette is warm, dominated by the brown of the umbrella and the clear, reflective surfaces of the water droplets.

New study recommends next-generation sequencing for extending lung cancer treatment to more patients

The higher sensitivity of the NGS platform could detect 25 per cent more patients who may be false negative based on the routine methodology.

'Cancer vanishing drug trial exciting but far from a breakthrough'

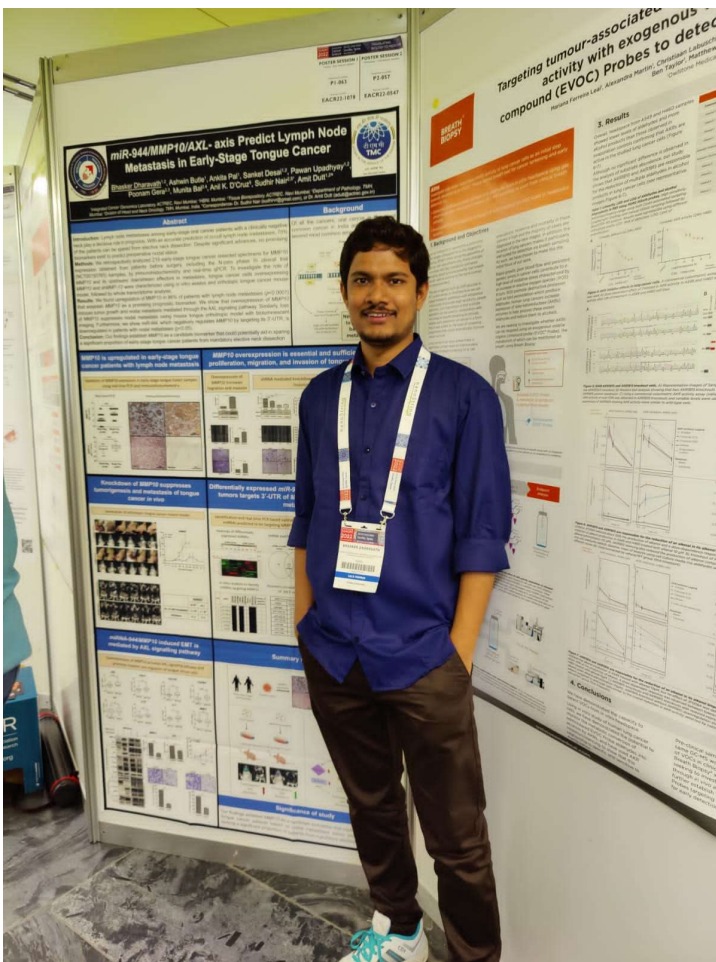

If nothing else, this study would surely encourage a broader study across multiple solid cancers with similar MMR-deficiency, says Dr Amit Dutt, scientist at Tata Memorial Centre-Advanced Centre for Treatment.
